

TUBULAR SKYLIGHT Electric Light Kit

NATURAL LIGHT ACCESSORY

Electric Light Kit

There may be instances where a room is either too small or it's undesirable to have a second light fixture on the ceiling. Natural Light has an ingenious solution! The light kit can be installed in the existing fixture's opening or can be added anywhere with additional electrical wiring. The light kit is available in 2 different models: single bulb and dual bulb and comes with a 5-year product warranty. For maximum energy efficiency, Natural Light recommends using CFL or LED bulbs.

(bulb not included)

ELECTRIC LIGHT KIT

Installation Overview

Installation of the light kit is very straightforward, but does require electrical wiring skills. A small hole is drilled in the lower section of the light pipe to accommodate the light fixture. The main lamp bracket comes assembled, but needs to be attached to the light pipe with the supplied nuts and washers. The kit must be wired to 120 VAC supply according to local codes and must be properly grounded. Complete instructions are included with each kit for easy installation. Additional wiring may require a licensed professional.

NOTE: Natural Light also sells a Solar Powered Light Kit which does not require any wiring to install.
