

Tile Roof

TUBULAR SKYLIGHTS

Add Soft, Natural Light

Tubular Skylights offer homeowners an affordable day-lighting option for rooms where adding additional windows isn't practical. Unlike traditional skylights, tubular skylights use a "light pipe" to collect the sun's rays without transferring the sun's heat. For tile roofs, there's a few model options. Considerations include the slope of the roof and if you prefer to attach the skylight directly to the roof or to a pre-built curb.

Tile Roof Installation Options:

- **Pitched Roof Model** with flashing skirt (turret optional)
- **Flat Roof Model** with flashing skirt (turret optional)
- **Curb Mount Model** (flat or very low slope only - flashing skirt or turret not needed)

TILE TURRET

RESIDENTIAL

Tile Roof Tubular Skylight

10" | 13" | 18" Models

- Choose from Pitched, Flat Roof or Curb Mount models
- Most pitched and flat roofs installs will require a Flashing Skirt
- Optional Turret Extension raises dome 3 inches to clear thicker tiles
- Installs easily with no structural changes or wiring required
- Performs optimally from sunup to sundown
- Disperses light evenly while blocking 99% of harmful UV rays
- Condensation release dome prevents fogging due to humidity
- Aluminum housing is powder coated both inside and out to prevent corrosion
- Available in 3 colors: black satin, bronze gloss or mill finish
- Hurricane Tested and Rated – HVHZ Compliant
- Florida Building Code Approved
- Limited Lifetime Warranty

TILE ROOF ACCESSORY

Flashing Skirt

Most tubular skylight installations on tile roofs will need an additional flashing skirt. The custom designed flashing skirt is installed over the tubular skylight flashing to ensure a weather-tight installation and is available for our 10", 13" and 18" models.

The flashing skirt is made of a soft, heavy-gauge aluminum that can be molded over any tile shape. The rubber seal fits over the base of the flashing. The steps to install a tubular skylight on tile roofs are slightly different than a standard installation. Please refer to our detailed installation instructions.

TILE ROOF ACCESSORY

Turret Extension

The turret extension is a uniquely designed extender for the tubular skylight and may be required for some high-profile S-tile roof installations. It raises the dome assembly up 3 inches to allow additional room for thicker tile roofs.

The turret is slipped over the flashing top opening to accommodate the additional height of the S-tiles. It is available for the 10" and 13" tubular skylight models in powder coated black or mill finish.

Accessories

Vent Kit

Exhaust system for 10" model – perfect for bathrooms.

Extra Light Pipe / Elbows

12" or 24" pipe extensions and elbow/angle adapters.

Dimmer Kit

Dims incoming light entering home during daytime hours.

Electric or Solar Light Kits

Installs inside tube shaft to provide light at nighttime.
